PREFACE

It is a joy for me to issue this edition of the Nāsadiya Sūkta, Ṛig Veda X. 129. In this Hymn of Creation we have the most sublime philosophical song in the history of the human race.

I am presenting here a fresh study of its contents. In my view its seven mantras present a consistent formulation of the metaphysical doctrine about cosmogony as known to the Vedic seers. Many other hymns of the Ṛigveda present an elaboration of the theories embodied in this Sūkta.

The hymn is planned in three portions as follows :—

I. Mantras 1 and 2. These enumerate the various philosophical doctrines as they prevailed in the time of the Ṛigveda, viz.

- | | |
|---------------------------------|----------------------------|
| (1) <i>Sad-Asad-Vāda</i> , | (2) <i>Rajo-Vāda</i> , |
| (3) <i>Vyoma-Vāda</i> , | (4) <i>Parāvara-Vāda</i> , |
| (5) <i>Āvaraṇa-Vāda</i> , | (6) <i>Ambho-Vāda</i> , |
| (7) <i>Amṛita-Mṛityu-Vāda</i> , | (8) <i>Ahorātra-Vāda</i> , |

I have explained these in a succinct form.

II. Mantras 3, 4, 5. These form the kernel of the author's views about creation. This portion bristles with a bunch of technical terms as *Ābhu*, *Tuchchhya*,

Salilam, Idam Sarvam, Manas, Kāma, Asat, Sat, Tiraś-chāna Raśmi, Adhaḥ, Upari, Retodhāḥ, Mahimānaḥ, Prayati and *Svadhā*. The statement is extremely compact but pregnant with the Sāṅkhya system in its origin or first formulation. For example, *Apraketa Salila* is *Avyakta Prakṛiti*; *Idam Sarvam* is the aggregate of the three *Guṇas* by which the cosmos is produced. *Tamas* refers to the *Avyakta* state of *Prakṛiti* as it existed in its source which was the other *Tamas* or the Transendent Puruṣa. *Abhu* corresponds to the principle of *Mahat* or the Universal. *Tuchchhya* signifies the finite or the limited principle of *Ahñkāra* or individuated mind which is mentioned as *Manas* with its potent seed *Kāma*.

Then the seven original categories, viz. *Mahat, Ahñkāra* and *Pañchabhūta* (*Mahadādi Viśeshāntāḥ* of later times) are divided into two major classes namely *Asat*, or the Prāṇic manifestation of *Mahat* and *Ahñkāra* and *Sat* or the *Pañcha Tanmātras* with the five *Bhūtas* and the ten senses. The visible cosmos is all *Sat*.

Mantra 5 repeats through various symbols the division of *Sat* and *Asat*. For example, *Upari* relates to *Asat*, i.e. to the higher principle of *Prāṇa* or Divine Energy, and *Adhaḥ* to *Sat*, i.e. *Prakṛiti* or Matter. Similarly *Prayati Parastāt* is mentioned as the higher principle and *Svadhā Avastāt* as the inferior principle of Matter. The *Retodhāḥ* Gods are in the higher source and the *Mahimānaḥ* Gods become operative in matter.

Mahimā is the same as *Mahat* or the first category to emanate from *Tamas* or *Avyakta Prakṛiti*.

III. Mantras 6 & 7. These are couched in a special style which is often found in the *Rigveda*, giving the doctrine not as a categorical statement but in the style of *Sampraśna* or Interrogation. The implication, however, is not negative but affirmative, e. g. कस्मै देवाय हविषा विधेम is not the query of perplexed ignorance, but an affirmation of the unknowable *Hiraṇyagarbha*, i.e. *Anirukta* *Prajāpati* whose symbol is 'Ku'. The same style is found in the two mantras, Mantra 6 in fact refers to the doctrine of the *Devas* (*Deva-Vidyā*) as the basis of creation. The whole of the *Rigveda* ultimately lends itself into the hands of the Deva School of Philosophy (*Deva-Vāda*), which may be taken to be the ninth doctrine in addition to eight enumerated in the first two mantras.

Mantra 7 refers to the *Adhyakṣa* of *Viśiṣṭi* whom the *Rishis* knew as Brahman. The statement whether the Creator himself knows the mystery of creation is rooted in the height of intuitional experience. This mantra succinctly and in a covert manner refers to *Brahmavāda*, Doctrine of *Brahma* as the highest basis of Vedic Philosophy from which other points of view originated.

Thus in the seven mantras of this *Sūkta* we find a complete statement of Vedic metaphysics which is the quint-essence of the *Rigveda*. I have published here a

running commentary of my own on the main ideas of the Sūkta, and then added comments of modern scholars like Keith, Macdonell, Wilson, and Coomaraswamy. I have also given the interpretation of ancient Indian writers, firstly from the Śatapatha Brāhmaṇa, secondly from Sāyaṇa's commentary on this Sūkta in the Taittirīya Brāhmaṇa, and finally his lucid commentary in the Ṛigveda Bhāṣya.

The Nāsadiya Sūkta is a blooming lotus comparable to a *Padma-kosha*. The seed of knowledge lies somewhere in its heart. It is saturated with the fragrance of thought that was in the intuition of the Rishis. One may repeat the hymn and breathe its aroma even now. The words are merely symbols which explode as thought advances to more subtle sheaths of Truth. 'This hymn is the finest effort of the imagination of the Vedic poet, and nothing else equals it'.

GRIFFITH'S TRANSLATION

1. Then was not non-existent nor existent:
there was no realm of air, no sky beyond it.
What covered in, and where? and what gave
shelter? Was water there, unfathomed
depth of water?
2. Death was not then, nor was there aught
immortal: no sign was there, the day's and
night's divider.
That One Thing, breathless, breathed by its
own nature: apart from it was nothing
whatsoever.
3. Darkness there was: at first concealed in
darkness this All was indiscriminated chaos.
All that existed then was void and formless:
by the great power of warmth was born
that Unit.
4. Thereafter rose Desire in the beginning,
Desire, the primal seed and germ of Spirit.
Sages who searched with their heart's thought
discovered the existent's kinship in the
non-existent.

5. Transversely was their severing line extended:
what was above it then, and what below it?
There were begetters, there were mighty
forces, free action here and energy up
yonder.
 6. Who verily knows and who can here declare
it, whence it was born and whence comes
this creation?
The Gods are later than this world's pro-
duction. Who knows then whence it first
came into being?
 7. He, the first origin of this creation, whether
he formed it all or did not form it.
Whose eye controls this world in highest
heaven, he verily knows it, or perhaps he
knows not.
-

COMMENTARY

RISHI OF THE SŪKTA—The Nāsadiya-sūkta is probably the most recondite statement of the metaphysical thought (*Bhāva-vṛttam*) of the Ṛishis employing a number of technical terms which later on were accepted as definitions in the codified systems of Indian philosophy. Its Ṛishi is Parameshthī Prajāpati who seems more to be the personification of an idea rather than a historical sage. Prajāpati in the transcendent form is conceived of as Svayambhū and as Parameshthī. Svayambhū or the Self-existent stands for the Absolute who is beyond all predication and above the two-fold categories as envisaged in the first two mantras, viz, beyond immortality and death, light and darkness, Prāṇa and Vāyu, Sat and Asat, Para and Apra, etc. Svayambhū as the Father-principle is the latent source of the manifested cosmos. As a pair to him is Prajāpati Parameshthī, representing the Mother principle of the manifested world, the plane of the basic duality, essential for the birth of the universe. Rightly therefore Parameshthī or the Universal is spoken of as the Seer responsible for the cosmogonic formulation in the hymn.

WORK OF PANDIT OJHA—This hymn contains refereace to a number of doctrines which served as nucleus for the gathering thoughts of the Ṛishis when poetic statements of Sṛishti-Vidyā were being attempted in a rich variety of bold linguistic forms. According to Pandit Madhusudan Ojha of Jaipur who was the one scholar to devote adequate attention to this hymn the first two mantras refer to ten different points of view, each of which occurs in different places in the Saṁhitās and the Brāhmaṇas. In his book '*Daśavāda-Rahasya*' he has carried out a discussion of these doctrines and I feel indebted to him for light on this sūkta. I have taken his comments and added much material of my own. The following is an exposition of the doctrines under reference.

Mantra I

1. **SADASAD-VĀDA**—According to this view the cosmos is *Sat* and its preceding cause *Asat*. In Ṛigveda 10.72 the period of cosmic time is said to be two-fold, viz. the life of Devas in a preceding age (*Pūrvya-yuga*) and a subsequent age (*Uttara-yuga*) the forms known as *Asat* and the latter as *Sat*. The two stand in a related priority and the *Asat* is said to be kin of *Sat* (*Sato bandhum asati niravindan*, RV.X.129.4). Elsewhere in the Ṛigveda both *Asat* and *Sat* are said to have existed in the highest Empyrean which was the abode of God and from which Aditi (Universal

Nature) and her son Dakṣha (presiding genius of cosmic Yajña) were born—

असच्च सच्च परमे व्योमन् दक्षस्य जनमन्नदितेरुपस्थे ।

अग्निर्ह नः प्रथमजा ऋतस्य पूर्वं आयुनि वृषभश्च वेनुः ॥

(RV. X. 5. 7)

The clearest interpretation is found in the Śatapatha where Ast is explained as the *Rishi*-creation, which is further explained as *Prāṇa-sṛisṭi* i.e. the principle of consciousness which was the primeval essence in the beginning of the cosmos :—

असद्वा इदमग्र आसीत् । तदाहुः किं तदसदासीदिति ।
ऋषयो वाव ते अग्रे असदासीत् । तदाहुः के ते ऋषय इति ।
प्राणा वा ऋषयः । (ŚB. 6.1.1.1.)

The gross material creation is said to be Sat and the preceding stage of Prāṇa or energy is termed Asat. It would be valid to speak of Brahman as Asat and Pradhāna or Prakṛiti as Sat. The Seer negates here the predication of either Asat or Sat with reference to the preceding ontological entity which is Parātpara Svayambhū.

2. RAJO-VĀDA—It is said here that *Rajas*, the primeval material cause of the universe, also did not have existence in the latent source. The doctrine of *Rajas* is very much amplified in the R̥gveda. Once it is said that all the Devas or the Prāṇic energies in creation were at rest in the beginning, i.e. sleeping in

the depth of the primeval ocean of energy. When the urge for creation was felt and the simmering waters of the Deep Sea were churned by a tectonic world-creating movement, the Devas or the Giant-Powers of creativity sprang to their feet and began their cosmic dance. This filled the whole space with particles of agitated dust (*Tivra-reṇu*, X. 72. 6) Their leader was Indra, the great dancer (*Nṛitu*, VIII. 24. 12), Natarāja of later mythology who performs the cosmic *tāṇḍava*. Each universe is a particle of dust or a grain of sand filling the infinite ocean which is the source of creation.

We meet with another conception of *Rajas* in the R̥gveda. It is said that *Rajas* is the power of black and white colour, the former is *krishṇa rajas*, i.e. latent power existing in the source and the latter is *śukla rajas*, the manifest power. The two are balancing each other, moving hand in hand, which we see in the form of Night and Day or as Darkness and Light revolving in a circle as the dynamic pulsating forces of creation—

अहश्च कृष्णमहरर्जुनं च विवर्तेते रजसी वेद्याभिः ।
वैश्वानरो जायमानो न राजावातिरज्ज्योषाग्निस्तमांसि ॥

(RV. VI. 9. 1)

The cosmic Fire or energy which has created the Sun and the Vaiśvānara in the individual centre depend for effective activity on the emergence of this two-fold *Rajas* as the basal dichotomy of the cosmos. They

are spoken of as the Pair of Twin Beauties, viz. the dark and white sisters in whose hands the mighty power of all the gods lies secure—

नाना चक्राते यम्या वपूंषि तयोरन्यद्रोचते कृष्णमन्यत् ।
श्यावी च यदरुषी च स्वसारौ महदेवानामसुरत्वमेकम् ॥
(RV. III. 55. 111)

Vedic *Rajas* should be understood as typifying the principle of Motion (*Gati*) as against the principle of Rest (*Sthiti*). Rest is equivalent to *Aja*, the Unborn and *Rajas* the born principle or created cosmos. The former corresponds to *Avyaya Purusha* and the latter to *Akshara Purusha*, the former being the support of the latter—

वि यस्तस्तम्भ षळिमा रजांस्यजस्य रूपे किमपि स्विदेकम् ।
(RV. I. 164. 6).

The six-fold *Rajas* referred to here is the same as 'Six Expansive Ones' (षड्वीरिकमिद्वृहत्, RV. X. 14. 16; देवीः षड्वीरिह, X.128.5). This is a reference to the six Space or to the *Lokas*, viz. *Bhūh*, *Bhuvah*, *Svah*, directions of *Mahah*, *Janah*, *Tapah*, with *Satyam* as the seventh corresponding to *Aja*, the unborn *Prajāpati*.

3. *VYOMA-VĀDA*—This is a reference to the doctrine of *Vyoma* equivalent to *Ākāśa* or Space as the ultimate substratum of all things which later on became a major plank in the philosophy of the Upanisads. All the creatures have their being in *Ākāśa*. They emanate

from *Ākāśa* and find their ultimate rest in *Ākāśa*. The RV. also makes frequent mention of *Parama Vyoma* as the source of all manifest *Devas* and *Vāk*. That highest *Ākāśa* is immortal and the source of material space (*Bhūtākāśa*). The thousand-syllabled speech (*Sahasrāksharā Vāk*, RV. I. 164. 41) belongs to the level of *Parama-Vyoma* whereas the speech uttered as sound is mortal and belongs to the sphere of differentiated *Ākāśa*. We all know that *Śabda* or speech is the attribute of *Ākāśa* and both exist on two relative planes, viz. immortal and mortal, i.e. Divine and Material—*Amṛita-Ākāśa* and *Martya-Ākāśa*, *Amṛitā-Vāk* and *Martyā Vāk*, *Parama-Vyoma* and *Vyoma*.

4. *PARĀVARA-VĀDA*—It has reference to the relative conception of *Para* and *Apara*, Absolute and Relative, Transcendent and Immanent, Higher and Lower, *Ūrdhva* and *Adhaḥ*, *Eka* and *Bahudhā* etc. This is a basic conception essential for manifestation. The doctrine is elaborated in *Asyavāmiya Sūkta* (RV. I. 164. 17-19). There are two categories *Parārdha* and *Avarārdha*, also *Parastāt* and *Avastāt*, *Parāk* and *Arvāk*. *Indra* symbolizes the former and *Soma* the latter; both are moving as an inseparable pair under a common mutual stress called *Rajas* or movement

इन्द्रश्च या चक्रथुः सोम तानि धुरा न युक्ता रजसो वहन्ति ।
(RV. I. 164. 19).

5. *ĀVARAṆA-VĀDA*—In the second line of mantra 1 an important question is asked which has a

material bearing on the basic principles of creation. It is the question about the measure of the cosmos which determines the size or the container of the object to be made. What was the covering, where was it and what gave shelter? These have reference to the principle of *Pramā* referred to in R̥gveda (*Kāṣīt pramā pratimā*, RV. X. 130.3). For any thing to be created two factors are essential to be determined, viz. size and model. The principle of size determines the centre (*Nābhi*), the diameter and the circumference (*Maṇḍala*). Whatever is created or made is subject to measurement. The cosmos is frequently spoken of as a measuring out, a planned activity on the part of its Creator. It is *Vimāna*, from the root *Mā* to measure. This is here referred to as *Āvaraṇa* and *Sarma*, the latter also meaning shelter or protection. *Sarma* is identified in the Brāhmaṇa literature as *Charma* (शर्म चर्म वा एतत्कृण्वस्य मृगस्यतन्मानुषं शर्म देवत्रा, ŚB. III. 2.1.8), i. e. esoterically speaking *Sarma* is the same as *Charma*. On the plane of Matter we refer to it as *Charma* or skin which covers and shelters the organism and each of its constituent limbs and also every cell; the same is known, as *Sarma* on the plane of the working of Prāṇa or Devas. There would be no Yajña without this principle of *Sarma* or divine influence and energy becoming operative inside the measured field where that force or power asserts itself. It is stated in the Purāṇas that God *Śiva* put on an elephant skin

(*Gaja-charma*) in the beginning of his cosmic dance. Here the Elephant is the symbol of *Ahaṅkāra*, the Ego which emerges in the womb of the Universal as the centre of individual envelopment. The size of the Universe is a big question in modern science, and so the question of *Virāt* in its spatial and temporal extensions engaged the attention of ancient thinkers and they have striven to formulate their answers in words, but speech, howsoever articulate, falls short of precise definition when it has to grapple with the transcendent categories of Svayambhū Purusha and Virāj Purusha. The Mother-principle is truly the mould or shelter of all created forms and her womb (*Yoni*) is the measure of the manifested forms. The Earth is the symbol of the Mother and it is conceived of as the great receptacle or container (*bhūmir āvapanam mahat*, VS. 23.10). Anything and everything in material manifestation has its Mother. The earth before us of whatever size is the symbol of motherhood and each star including the sun has its mother so that ultimately the whole cosmos existed in the womb of its mother, symbolically thought of as Night (*jagato nivesanī*, RV. I. 35.1), Darkness or the Great Goddess (*Mahā Devī*, *Mahā Rātri*, *Mahā Māyā*).

6. AMBHO-VĀDA:—This was also the basic creed of Vedic poets to think of the cosmic source or mother in terms of the unfathomed waters which are referred to variously as *Āpaḥ*, *Salilam*, *Samudra*, *Soma*,

Rita, Arṇava, etc. in the R̥gveda. Those waters as the primeval ocean or the divine mother concealed in their womb millions and billions of fiery sparks which have now become visible to us as so many Suns. The process of creation on the plane of the Universal is continuous going on without stopping and should not be thought of as a historical event in time. Whatever happened in creation in the beginning is happening also today. The horoscope of the cosmos is unfolding incessantly and the powerful strides of Time are moving in endless circles. The infinite ocean as the source was wrapped in stillness but got agitated somewhere and by someone into convulsions which do not seem to stop anywhere. This has been graphically conceived as a mighty dance movement of the Gods or of the Yatis, i. e. a two-fold movement implying a pull towards the centre (*Pravṛitti*) and a corresponding movement turning away from the centre (*Nivṛitti*). Both are essential for the dance, viz. the stable axis and the moving felly. The Deva stands for Yajña, order, system or stability, whereas the Yati or Muni for the opposite principle of erratic motion. They coexist and are essential for creation

मुनिर्देवस्य देवस्य सौकृत्याय सखा हितः,

(RV. X. 136.4).

Each Deva is the form of Agni and Agni is the son of Waters (*Apām napāt*). The Gods discovered

beautiful Agni hidden in the waters under the care of the seven sisters (RV. III. 1. 3, अविन्दन्तु दर्शतमप्स्वन्तर्देवासो अग्निमपसि स्वसृणाम्). The first to be born from the ocean of *Rita* was Agni or *Sūrya* or Indra which is the symbol of the cosmic rhythm expressed as creation and dissolution.

Mantra II

7. AMṚITA-MṚITYU-VĀDA :—Mantra 2 refers to the doctrine of immortality and death, the former is the Deva and the latter is Bhūta; the one is energy and the other matter, the one is divine and the other human, the one is beyond time and space and the other conditioned by time-space relata, the one stands for the principle of rest and the other for motion. In this way the two principles have diverse connotations and stand out as a coherent formula so intrinsically inseparable from each other that the Śatpatha Brāhmaṇa speaks of *Amṛita* existing within *Mṛityu* and of *Mṛityu* within *Amṛita* (ŚB. X. 5.2.4). In creation both coexist. It is said that Aditi, the mother of Gods, gave birth to eight sons, seven of whom were the Āditya Immortals and the eighth was *Sūrya*. Aditi coaxed the first batch to create but with immortality alone as their possession they did not succeed. Then she turned to Mārtaṇḍa or *Sūrya* who combines in himself both *Amṛita* and *Mṛityu*, Life and Death, Energy and Matter and he was able to bring Life to the level of Matter. In the eyes of the Ṛishis *Sūrya* is the sign.

of demarcation between immortality and death, that which is on this side of the Sun is in the grip of death or time and that which is beyond is in the lap of Amṛita—

स एष मृत्युस्तद्यत्किंचार्वाचीनमादित्यात्सर्वं तन्मृत्युनाप्तम्
अथ य एनमत ऊर्ध्वं चिनुते स पुनर्मृत्युमपजयति

(ŚB. 10.5.1.4)

8. AHORĀTRA-VĀDA—This was another name of the Kāla doctrine, i.e. Time as the supreme cause of the worlds manifested as a rhythm which is visible in the smaller and greater units of time. For example, Ahorātra, the two-halves of the month, the seasons, the two semesters of the year, the *Manavantara* periods and the further astronomical measures of time—at every point there is a rhythm in which time presses on time as the supreme impeller and no other extraneous force or power is needed to explain the recurrent phenomenon of cosmic manifestation (कालं कालेन पीडयन्, मनु). The advocates of this doctrine had a long history and their tenets were of the widest acceptance by the teachers of both the Vedic and materialist schools. The Atharva Veda gives a systematic account of the belief of the Kāla-Vāda metaphysics (AV. 19. 53. 14). All the created worlds are the chariot wheels of time. Time is a prolific horse who knows no decay and whose thousand eyes are turned to every space. He bears every one onward. Immortality is the axle of

the chariot which moves on seven rolling wheels. He is the primal Deity, Deva whom all invoke. He is Kāla, Full Vase overflowing with life. He is the son of the Self-existent Father; there is no other power than he. Heaven and Earth were created by him and he stirred to motion what is and what will be. In Kāla all things have their being including Mind and Prāṇa. The highest Brahman is in Him; the Fiery principle wherever we see it is the product of Kāla, who is the father of Prajāpati and the lord of all. He made this universe and stirred it to motion and on him it rests. He is the support of the universal principle known as Parameshthī, Kāla is self-made, whom we know as Kaśyapa Prajāpati, the on-looking creator. The sun ascends by Kāla, and in Kāla sinks again to rest. From Kāla sprang the twin principles of *Rik* and *Yajus*. In Kāla is the cosmic Yajña which is the eternal food for the gods. Both this world and the world that is lofty exist in Kāla. Kāla has conquered all the worlds and is supplicated by all as God Supreme.

The Night and Day unit (*Ahorātra*) is but a sample, an exemplar of Mahā-Kāla which has taken form and all the mystery which exists in the source exists also in each fleeting moment of time. It is the great divine Horse of the Aśvamedha sacrifice. Time-Horse is being cut to pieces limb by limb but it does not decay or die. This intricate and lofty philosophical doctrine had many ramifications. For example, the conception

of Garutmā Suparṇa, the metres, the Chakra both as Kāla-chakra and Brahma-chakra, Darśa-Paurṇamāsa sacrifices and Manvantaras were linked to the metaphysics of Kāla. The adepts in this knowledge were known as Ahorātra-vids. In Purāṇic imagery Kāla is symbolized as the Ṛishi Mārkaṇḍeya who has a life of a thousand year (*Sahasrāyu*). At the end of the period of dissolution when Lord Viṣṇu starts afresh his chain of creativity, Mārkaṇḍeya is expelled out of the womb of Nārāyaṇa and witnesses the miracle of the eternal life principle incarnating as a child and floating on a leaf on the surface of the Infinite Ocean.

9. DEVA-VĀDA—In verse 6 there is a reference to the Gods (*Devāḥ*) and a hypothesis is suggested that the cosmos was created by the activity of Devas, but as the divine powers themselves were subsequents to the birth of cosmos it is doubtful whether its mystery is known even to them. The doctrine of the Devas is the most widely accepted one in the Ṛigveda as the root cause of the cosmos. The Devas stand for the divine principle at all levels, viz. Mind, Life and Matter and there is no doubt that the Ṛishis had a deep belief in the potency of differentiated Prāṇic energies conceived of as the Devas who have produced these worlds and living beings and are sustaining them. One could say that of all the points of view enunciated in the Ṛigveda the one about the Devas is the most comprehensive in which all others

become merged. Deva is literally the principle of light that shines in all times and places. The nature of that light is a vibration, a quivering, a process of contraction and expansion which bears the mystico-theological appellation of Prāṇa. It is stated that in the beginning one transcendent Asura of mighty Prāṇic principle presided over all the Gods (*महद् देवानामसुरत्वमेकम्*).

He was called Asura because in him was concealed the *Asu* or Prāṇa or the life germ which becomes manifested as so many Devas or divine powers that are in heaven and on earth. It is argued that the Devas also do not know the mystery of creation since the thousand headed Purusha whom they offered as an oblation in the cosmic sacrifice existed prior to their birth.

10. BRAHMA-VĀDA—The whole burden of this Sūkta is to trace the creation to its source in a transcendent being who is here called *Adhyakṣha* existing in the highest Empyrean (*Parame vyoman*, RV. X.129.7). The word Brahman has not been used in this sūkta, but there is hardly any doubt that the same is suggested by an overwhelming force of symbolical words. He is referred to as Ekam in mantra 2 and that one is suggestively called Parātpara, the Absolute beyond which nothing else existed (*तस्माद्वान्यन्न परः किञ्चनास*, RV. X.129.2). The appropriate symbol for the transcendent reality is given as Ābhu, the all-encompassing

reality, which becomes modified in one of its portions as the cosmos. This later is called *tuchchhya*, a minute unit in comparison to the Ābhu that surrounds it.

The Nāsadiya Sūkta is a model of brevity and compact thought presenting the highest metaphysical doctrine in only three and a half mantras. In mantra 2 the transcendent reality called Ekam is said to be of the nature of Prāṇa in that it was breathing but there was no material breath to sustain that life (*Ānīd avātam*). How such a thing is possible no one knows nor can explain. The self-existent Creator lives in his own right and this power is referred to here as *Svadhā*. Its precise genesis is an unknown mystery. Some call it the Līlā or Krīḍā of the Lord. The word *Svadhā* points to the self of the Creator as a substance by which the creation is brought into being.

Mantra III

TWO-FOLD TAMAS PRINCIPLES:—In mantra 3 there is a reference to the two principles of Tamas, the one higher and the other lower, the latter being enveloped in the womb of the former. It is an *Anugama* reference depending on the exigencies of interpretation. The idea is that the two parents of the cosmos, viz. Svayambhū and Paramēsthī both were concealed in their source; the first as an unmanifested and the second as formless manifestation. A

reference to the second one is found in the mantra itself, viz. *Salilam*, the Waters also called *Āpah*, *Samudram*, or the mother principle in which creation (*Idam sarvam*) was concealed as something mysterious and unknown (*Apraketam*). This was the mother principle or Paramēsthī, the universal which is the latent source of the individual creation both on the level of the cosmos and in each living being. The mother with her womb creating the child is symbolised as Night (or Darkness) (*Tamas*.) The other higher and deeper *tamas* is the transcendent principle called Svayambhū, the self-existent Brahman symbolised as an unknown and unknowable factor like the absolute arithmetical point. It is referred to as *Anirukta*, *Amūrta* and Ka Prajāpati i.e. the father principle which creates his counterpart as his *Mahimā* or *Mahat*.

ĀBHU AND TUCHCHHYA:—These two principles are referred to as *Ābhu* and *Tuchchhya*. The *Ābhu* is the same as the thousand-headed Purusha (RV. X.90.1) and also the Purusha with heads, eyes, arms and feet on all sides.

विश्वतश्चक्षुरुत विश्वतोमुखो विश्वतो बाहुस्त विश्वतस्पात्

(RV. X. 81.3).

Such a being can only be a Prāṇa Purusha in which all the undifferentiated faculties exist at all points as soon as the individuated Purusha begins to be formed each limb is located separately. This is the difference

between the Avyakta and Vyakta, and between what is known in Śaiva Iconography as the Liṅga Vighraha and Puruṣha Vighraha, the former is merely a symbol of all the possibilities of existence whereas in the latter they take a definite form and shape.

The next important word which refers to creation is *tuchchhya* which signifies a dimensional form which is always termed as smaller or measured with respect to one which is beyond all measure. For example, the circumference evolved out of its centre is always to be deemed as inferior with respect to its source. The centre is Puruṣha and the circumference is its *Mahimā* (RV.X. 90.2), the former always taking precedence of the latter, the one being known as *Ūrdhva* and the other as *Iha* i.e. the non-directional particular point in a geometrical frame-work. It is the secret of Vedic doctrine that the absolute transcendent Brahman called *Abhu* or *Ananta* becomes modified by his own creative self and that becomes the *Samsāra*.

How this creational bifercation takes place is mentioned in the last part of mantra 3. It is the power of Tapas which transforms the point into its greatness. Tapas elsewhere is known as the primeval Heat (*Agraja tapas*), *Devaushnya*, the divine heat or an incalculable explosion of energy called *Abhiddha tapas* (RV. X. 190.1). The source, nature and effect of this Tapas which could have existed and functioned

as an infinite ocean of the waves of Prāṇa (*Samañ-
chanaprasāraṇa*) or Light and Heat (*Jyoti and
Ghramśa*) cannot be determined. What actually hap-
pens as a result of this activity is the creation of
individual centres as whirl pools of energy which the
Rishi here speaks of as Ekam. This one also was an
unknown factor called Avyaya Puruṣha or Aja and
Kimapisvid (किमपिस्विद्) something which is beyond
comprehension. (RV. I. 1.64.6).

Mantra IV

PRINCIPLE OF KĀMA :—Mantra 4 takes up the
clue of the creative process after the one centre
comes into being in the midst of the universal,
it is known as the Mind, Manas or Consciousness
with all its potentialities to begin to function as
a centre. The basic quality of mind is Kāma. It
was the first principle to come into existence as
mentioned here by the words *Agre* and *Prathamam*.
According to the Upanishads Manas is known
variously as *Prajñāna*, *Samjñāna*, *Vijñāna*, *Sanikalpa*,
Manishā, *Smṛiti*, *Kratu*, *Asu*, *Kāma*, *Hṛidaya* etc. and
that *Prajñāna* is Brahma itself comprehending within
its meaning and substance Brahma, Indra, Prajapati
and all the Gods (*Aitareya Up.*, III. 2).

The word Kāma, literally desire, refers also to
the basic faculty by which the one principle becomes
split up into two as the two halves of a single Egg, or
the two parent called *Dvāyā-Prithivī*, the father and

the mother principles, Agni and Soma, or the eternal man and the eternal woman. They are bound to each other by the most subtle principle of Love or Desire on the triple plane of Mind, Life and Matter. Kāma is the fecundating seed that germinates in the form of each living organism in the womb of the mother. It is a mysterious power which vitalises the whole consciousness. It is Nature's own technique to perpetuate life on the plane of manifestation. The life span as expressed in each cell is designed to prepare each organism for the consummation of the secret of Love. Kāma in this sense is a divine act symbolised in Vedic term as the marriage of heaven and earth or the sacrament which throws open the flood gate for the descent of immortal Prāṇa in mortal matter. The union of Deva and Bhūta is accomplished through Kāma which becomes manifested as the principle of the Mind.

KINSHIP OF SAT-MATTER WITH ASAT-PRĀṆA :—

The second part of this mantra refers to the kinship between Sat and Asat. Sat here signifies the world of Matter and Asat the divine principle of Prāṇa or Life. The Śatapatha makes this definition clear that the principle of Prāṇa is termed in the esoteric languages of the Vedas as Asat (*Prāṇā vā rishayaḥ asat*, ŚB. 6.1.1.1). It is stated elsewhere that in the cosmic activity of the divine powers it is the Asat which

creates Sat, viz. the principle of Prāṇa or life or consciousness which creates matter,

देवानां पूर्व्ये युगे ऽसतो सद्जायत ।

RV. X. 72.2.

Although mind and matter are diametrically opposed they are inseparable companions in each organic centre or the living body. It is to this dominant relationship that the mantra makes a specific reference. Both are *sabandhu* viz. kith and kin, which is the same as the doctrine of having a common womb (*Sayoni*). The living is the kin of the dead (matter) and the immortal has a common womb with the mortal,

जीवो मृतस्य चरति स्वधाभिरमर्त्यो मर्त्येना सयोनिः ।

RV. I. 164.30.

Living consciousness as manifested in matter is the supreme mystery which is a burden of these mantras. The poets direct the power of their inspired mind to the unravelling of this top mystery. A union of mind with matter is a fact of which each one is a witness to one's ownself although no science or philosophy can explain how it has happened. The embryonic development of the mind and the body and all the psychical, vital and physical functionings and powers of thought, emotions, feelings etc. are a miracle of which the secrets are unknown.

Mantra V is couched partly in the language of wonderment, cogitating on the obscure nature of the mystery, and partly trying to approach the problem in the manner of science, tackling with such a reality as *Retas* or the Seed and its assuming a majesty *Mahimā* by systematic germination and growth. The reference to *Raśmi*, a ray of light is quite happy in the context of Vedic symbolism where the supreme divine reality is conceived of as Brahman or the Supernal Sun with a thousand rays of which a single ray is reflected in each living centre. If we look at the word of the mantra with deeper insight the question arises as to what is the ray, why it is said to be coming from the oblique side and who are the divinities that claim this spark to be their own. The answers to these three questions are significant in this context. The ray of light is *Prāṇa*, its source is the immortal divine consciousness or *Vijñāna* which is the same as *Sūrya*, the symbol of Brahman. The deities which cluster round this Ray are those known as the Light-sipping Devas, *Marīchīpa Devas* (VS. VII. 3). All the powers that are in heaven and on the earth, i.e. in the immortal divine source and in mortal matter are present in the single *prāṇic* radiant principle called Life. Although it is one and indivisible still it is differentiated within the living organism as so many different Devas or *prāṇic* centres each sipping its own light or radiant energy. There is not a single cell of matter where the radiant Deva principle called *Prāṇa* does

not incarnate. This radiant spark of light is said to spread in an oblique direction (*Tiraśchīna*), which implies that it creates its *maṇḍala* or *mahimā* with itself as the source or centre (cf. VS. 32. 2, *Ūrdhva*, *Adhaḥ*, and *Tiryak*). The four cardinal and the four intermediate directions form the sphere which the *Prāṇa* as Light-ray pervades (cf. *sa sadhrīchīḥ sa viśhūchīr vasānaḥ*, RV. I. 164. 31). Those who see it are left wondering—‘whether it has come from below’, ‘whether it has come from above’. The words *Adhaḥ* and *Upari* are relative and symbolical, the former refers to the manifested form in matter and the latter to the unmanifested source in the divine transcendent reality. The former is *Ekā-pāda*, *Adhaḥ*, *Iha*; the latter is *Tripād*, *Ūrdhva*, *Upari*. Both remind us of a rich terminology familiar in many mantras and different formulations.

The *Rishi* then refers to two kinds of Devas, firstly those who are inherent in the seed or germinal state; wherever the seed is deposited the Devas or divine powers are incipient in it, forming its invisible or potential centre. The second class of Devas are called *Mahimānaḥ*, i.e. those manifesting as the greatness or majesty of the centre in the form of the circumference. *Mahimā* is the same as *Maṇḍala* which refers to the totality of the manifested powers which had their latent existence in the invisible source. Thus all manifestation is an interplay of

these two aspects of the single creative act constituted as the seed and the organism. The one is hidden (*paroksha*), the other is visible (*pratyaksha*); the one is *Prāṇa* (Energy) the other is *Bhūta* (Matter). These may be imagined as the two wheels of the car of Indra, i.e. the central vital *Prāṇa* (*Madhya Prāṇa*, ŚB. VI. 1. 1.) who is present in each living organism.

The same imagery is extended in the fourth part of the mantra under the symbolical term *Svadhā* and *Prayati*. *Prayati* is *Prāṇa*, the regulating centre which is the same as the seed, or in other terms *Sthiti* or *Pratishṭhā*. We are reminded here of the explanation given to the letter *Ya* of *Hṛdaya*, i.e. *Yamayati*, that which governs and controls the manifest form, itself acting as the centre. The other principle is called *Svadhā* which is responsible for creating the *Pitṛis*. The *Pitṛis* are the Father-Mother principles operative behind each manifest form. *Svadhā* corresponds to *Mahimā* and *Prayati* to *Retodhā*, the two pairs typifying an appropriate terminology of the divine formless reality and the material forms or corporeal modality on the plane of matter. As explained earlier the one is *Sat* and the other *Asat* and both exist as an essential pair. The doctrine of the two co-existing is formulated as *Para* and *Avara*, *Prayati* or the source being *Parastāt* and *Svadhā* or the manifest form being *Avastāt*.

Mantras VI & VII

The last two mantras are couched in the language

typical to Vedic scepticism throwing open the flood-gates of doubt and bold enquiry knowing no bound :

Who verily knows and who can declare it ?

Whence it was born and whence comes this creation ?

The Gods are later than the world production.

Who knows then whence it first came into being ?

He, the first origin of this creation, whether he formed

it all or did not form it,

Whose eye controls this world in highest heaven,

He verily knows it, or perhaps he knows not.

Such a confession of ignorance should have been rooted in deep knowledge. In the worlds of Maurice Maeterlinck : 'Is it possible to find in our human annals, words more majestic, more full of solemn anguish, more august in tone, more devout, more terrible ? Where could we find at the very foundation of life a completer and more irreducible confession of ignorance ? Where, from the depths of our agonisticism, which thousands of years have augmented, can we point to a wider horizon ? At the very outset it passes all that has been said, and goes farther than we shall ever dare to go, lest we fall into despair, for it does not fear to ask itself whether the Supreme Being knows what He has done—knows whether He is or is not the Creator, and questions whether He has become conscious of Himself.'

No doubt the *Nāsadiya Sūkta* touches the highest point in the philosophy of India. It is the most im-

portant contribution of the R̥gveda to Indian metaphysics, as observed by Keith writing about this hymn of creation :

The poem commences with an assertion : in the beginning there was neither being nor not-being : there was no atmosphere nor sky: the question is asked what covering there was, and was there a fathomless abyss of waters. There was neither death nor immortality, nor night nor day. There was nothing else in the world save the one which breathed, but without wind, of its own power. There was, however, darkness, and a moving ocean without light: through the might of fervour, Tapas, was born a living force enveloped in a shell. Then there developed desire, Kāma, the first seed of mind: the sages found the root of not-being, searching for it in the heart. Thus far the first four verses: the fifth is a puzzle: it may be referred to the sages who drove a division through the universe and distinguished the upper and the lower, the world of nature above, the principle of nature below: but this version is wholly problematical. The next two verses end with a deep expression of doubt: the gods are later than the creation and cannot know of its origin: whether the creation was made by itself or not, the overseer of it in the highest space of heaven he knows of it, or perhaps he knows not.

The hymn is clearly difficult to understand: the part of the seers, which appears merely as a statement

of what their reflections have arrived at, is even understood by Bloomfield to be a cosmical action, indicating that they took part in the creation of the universe. This seems, however, unnatural and strained, but not more so than the interpretation of verse 5 adopted by Deussen, which would make it into an assertion that the sages were able to discriminate between the thing in itself and the phenomenal world, between natura naturans and natura naturata. What is clear is that there is conceived as first existing one thing, which is described as breathing without wind, an effort to express a primitive nature different in essence from anything known to the priest, conceived perhaps metaphorically only as a dark ocean or chaos. In this through Tapas, which here must rather be cosmic than refer to the activity of seers or other human powers, by inward fervour, springs up the being enveloped in a shell, which in the later conception is the golden world egg. The next step in development is the appearance of desire, unless that it is to be taken as born of mind, when it is described as the first seed of mind. If so, the mind must be deemed to be an attribute of the one which develops in the shell, whence springs desire: in the alternative the phrase may be taken as the source which produces mind, and desire, unconscious will, may be held to produce conscious will or mind. The latter view,

however, is unnatural in point of language and has the additional disadvantage that in the Taittirīya Āraṇyaka we already find that mind is given as prior to desire in a passage which is based on the hymn. Nor can we hold—and this is much more important—that Kāma was conceived as unconscious will: it is rather the natural expression for conscious desire, which would rise from the existence of mind as a substratum. The later philosophy makes the knowledge of desires depend on the existence of mind, and this idea may be foreshadowed here, where mind is made a cosmic *prius* of desire. Beyond this the poet does not go: he ends with the suggestion of a supreme deity as distinct from the gods who are created, and ends with a doubt whether such a deity has power of knowledge, that is, whether it has consciousness at all. We cannot, therefore, really say whether or not the first cause of the world is deemed a conscious entity at all: the assertion that it was not the first cause of the world is not not-being, which is in words a little inconsistent with the assertion that the sages found the root of being in not-being, searching in the heart, is in effect an assertion that it was a peculiar sort of being, different from ordinary being. The reference to the heart, however, as the place of search reminds us that the heart even in the Rīgveda seems the abode of mind, and suggests that in the ultimate issue the final entity might be deemed to be possessed

of mind, for consciousness, without an object, is the nature in the Vedānta of the Brahman and even of Puruṣa in the Sāṃkhya. This hymn is the finest effort of the imagination of the Vedic poet, and nothing else equals it." (The Religion & Philosophy of the Veda and Upanishads, pp. 435-437).

MACDONELL'S TRANSLATION

1. Non-being then existed not, nor being :
There was no air, nor heavens which is
beyond it.
What motion was there ? Where ? By whom
directed ?
Was water there, and fathomless abysses ?
2. Death then existed not, nor life immortal ;
Of neither night nor day was any semblance.
The One breathed calm and windless by
self-impulse :
There was not any other thing beyond it.
3. Darkness at first was covered up by darkness ;
This universe was indistinct and fluid.
The empty space that by the void was hidden,
That One was by the force of heat engendered.

4. Desire then at the first arose within it,
Desire, which was the earliest seed of spirit.
The bond of being in non-being sages
Discovered searching in their hearts with
wisdom.
5. Their ray extended light across the darkness :
But was the One above or was it under ?
Creative force was there, and fertile power :
Below was energy, above was impulse.
6. Who knows it truly ? who can here declare it ?
Whence was it born ? whence issued this
creation ?
And did the gods appear with its production ?
But then who knows from whence it has
arisen ?
7. This world-creation, whence it has arisen,
Or whether it has been produced or has not,
He who surveys it in the highest heaven,
He only knows, or ev'n he does not know it.

[A. A. MACDONELL]

Sanskrit Literature (1900) pp. 136-37.

MACDONELL'S COMMENTS

Macdonell calls it the Hymn Of Creation and says that in this cosmogonic poem the origin of world is explained as the evolution of the existence (*Sat*) from the non-existent (*Asat*). Water thus came into being first; from it was evolved intelligence by heat. It is the starting-point of natural philosophy which developed into the Sāṅkhya system.

He writes : Apart from its high literary merit, this poem is most noteworthy for the daring speculations which find utterance in so remote an age. But even here may be traced some of the main defects of Indian Philosophy—lack of clearness and consistency, with a tendency to make reasoning depend on mere words. Being the only piece of sustained speculation in the R̥gveda, it is the starting-point of the natural philosophy which assumed shape in the evolutionary Sāṅkhya system. It will, moreover, always retain a general interest as the earliest specimen of Aryan philosophic thought. With the theory of the Song of Creation, that after the non-existent had developed into the existent, water came first, and then intelligence was evolved from it by heat, the cosmogonic accounts of the Brāhmaṇas substantially agree. Here, too, the non-existent becomes the existent, of which the first form is the waters.

On these floats Hiranyagarbha, the cosmic golden egg, whence is produced the spirit that desires and creates the universe. Always requiring the agency of the creator Prajāpati at an earlier or a later stage, the Brāhmaṇas in some of their accounts place him first, in others waters. This fundamental contradiction, due to mixing up the theory of creation with that of evolution, is removed in the Sāṅkhya system by causing Puruṣa, or soul, to play the part of a passive spectator, while Prakṛiti, or primordial matter, undergoes successive stages of development. The cosmogonic hymns of the R̥gveda are not only thus the precursors of Indian philosophy, but also of the Purāṇas, one of the main objects of which is to describe the origin of the world. (*Sanskrit Literature*, pp. 137—38).

According to him in the first verse the subject of *āsīt* is 'this universe' which in the beginning was neither non-existent nor existent. *Tadānīm* signifies before the creation. The word *ambhas* refers to the existence of the water, the ocean in the beginning.

In verse 5 the word *Raśmi* is important. According to Macdonell the meaning of this word here is uncertain, but it may be an explanation of *bandhu* in 4c: the cord with which the sages (referred to by *eshām*) in thought measured out the distance between the existent and the non-existent, or between what was above and below; cp. 8. 25, 18, *pari yo raśminā*

divo antān mame prithivyāḥ, Who with a cord has measured out the ends of heaven and earth; cp. also the expression *Sūtram vitatam* (in A. V. X. 8. 37), the *extended string* with reference to the earth. *Retodhās* and *Mahimānaḥ* are contrasted as male and female cosmogonic principles, to which correspond respectively *Prayatis* and *Svadhā*. In T. S. 4. 3. 11. 1. mention is made of *Trayo Mahimānaḥ* connected with fertility. (*Vedic Reader*, p. 210). But in his later metrical translation printed in *Hymns From the R̥gveda*, he changed the meaning to 'ray', which we have also explained.

H.H. Wilson translated this Hymn as follows :—

The deity is Paramātmā, the author of the creation, preservation and dissolution of the various entities (*bhavas*), these being the subjects treated of in the hymn; the R̥ishi is Paramātmā, under his appellation Parameshthin.

1. The non-existent was not, the existent was not; then the world was not, nor the firmament, nor that which is above (the firmament). How could there be any investing envelope, and where? Of what (could there be) felicity? How (could there be) the deep unfathomable water?

2. Death was not nor at that period immortality, there was no indication of day or night;

THAT ONE unbreathed upon breathed of his own strength, other than THAT there was nothing else whatever.

3. There was darkness covered by darkness in the beginning, all this (world) was undistinguishable water; that empty united (world) which was covered by a mere nothing was produced through the power of austerity.

4. In the beginning there was desire, which was the first seed of mind; sages having meditated in their hearts have discovered by their wisdom the connection of the existent with the non-existent.

5. Their ray was stretched out, whether across, or below, or above; (some were shedders of seed, (others) were mighty; food was inferior, the eater was superior.

6. Who really knows? Who in this world may declare it? Whence was this creation, whence was it engendered? The gods (were) subsequent to the (world's) creation; so who knows whence it arose?

7. He from whom this creation arose, he may uphold it, or he may not (no one else can);

he who is its superintendent in the highest heaven, he assuredly knows, or if he knows not (no one else does).

(Rigveda Translation) Vol. VI, pp. 236-37.

WILSON'S COMMENTS

1. THE NON-EXISTENT, ETC.—To render this phraseology intelligible we must restrict the meanings of *sat* and *asat* ("ens" and "non-ens") to visible and invisible existence, or in Hindu cosmology to matter and spirit (*prakṛiti* and *puruṣa*), which in the Vaidika system would not, as in the Sāṅkhya, have a distinct existence, but would be blended and lost in the one invisible, immaterial, incomprehensible First Cause, or Brahma, in the intervals of creation. The language used in describing this is usually somewhat vague, but the notion is evidently that the First Cause was in the beginning undeveloped in its effects, and existed before either inactive matter or active spirit, considered as distinct; it is not intended to be said that no cause or origin, no author of the universe, existed before creation, but that nothing else existed, neither matter nor spirit, and consequently that He created both: see the Vishṇu Purāṇa, p. 12, where a similar passage is cited from the Veda, and this passage also is quoted by the

commentator (Ibid., note 16): though it is not perhaps quite accurately explained.

ANY INVESTING ENVELOP—The Scholiast refers to the Purāṇas for an explanation, and accordingly see Vishṇu Purāṇa, p. 16, and note 25. Each element as created or developed is invested by its rudiment.

OF WHAT COULD THERE BE FELICITY—I.e., of whom or of what living being could enjoyment, or fruition, whether of pain or pleasure, be predicated, there being no life?

HOW COULD.....WATER—Sāyaṇa explains away another text, *idam agre salilam āsit* "this in the begining was water," by saying that that referred to another period.

2. BREATHED OF HIS OWN STRENGTH—Sāyaṇa takes *Svadhā* as meaning *Māyā* or *Prakṛiti* (Illusion or Nature), the source of the world of phenomena. He understands *Saha* "breathed along with *Māyā*."

3. THROUGH THE POWER OF AUSTERITY—*Tapas* is said to mean not penance, but the contemplation of the things which were to be created.

4. THERE WAS DESIRE—i.e., in the mind of the Supreme Being.

5. THEIR RAY WAS STRETCHED OUT—This according to Sāyaṇa, refers to the suddenness of creation, which was developed in the twinkling of an eye, like the flash of the sun's ray. It was so quick,

he continues, that it was doubtful whether the things in the central space (understood by the world "across") were created first, or those above or those below; in other words, creation took place simultaneously in all three portions of the universe. Sāyaṇa tries to reconcile this with the received notion of creation in a series, (viz., that from *Ātmā* came the *ākāśa*, and from the *ākāśa* the wind, from the wind fire, etc.) by saying that this was the order in which things were created, but the development of the world was like a flash of lightning, so that the series could not be distinguished.)

WHETHER ACROSS, OR BELOW, OR ABOVE—The word *tiraśchīnaḥ*, "across," perhaps refers to the *tiryaksrotas*, "that in which the stream of life is horizontal," i.e., the animal world. The epithets in the second line of the verse are unusual and obscure; according to Sāyaṇa, the meaning is that among the created objects some were living creatures, others were great, as the sky, etc., the former being the enjoyers (*bhoktāraḥ*), the latter the things to be enjoyed (*bhojyāḥ*), so the creation was distinguished as the food and the feeder. The verse occurs in Yajush, XXXIII. 74, where Mahīdhara gives it several different interpretations, none more intelligible than those of Sāyaṇa.

6. WHENCE WAS.....ENGENDERED—I.e., from what material cause, and from what creative cause, did it arise?

Comments of the Śatapatha Brāhmaṇa
(10. 5. 3. 1)

शतपथ ब्राह्मण १०।५।३।१-३

1. Verily, in the beginning this (universe) was, as it were, neither non-existent nor existent; in the beginning this (universe), indeed, as it were, existed and did not exist: there was then only that Mind.

2. Wherefore, it has been said by the Rishi (Rig-Veda X, 129, 1), 'There was then neither the non-existent nor the existent;' for Mind was, as it were, neither existent nor non-existent.

3. This Mind, when created, wished to become manifest,—more defined, more substantial; it sought after a self (body). It practised austerity; it acquired consistency. It then beheld thirty-six thousand Arka-fires of its own self, composed of mind, built up of mind; mentally alone they were established (on sacrificial hearths) and mentally built up; mentally the cups (of Soma) were drawn thereat; mentally they chanted, and mentally they recited on (near) them,—whatever rite is performed at the sacrifice, whatever sacrificial rite there is, that was performed mentally only, as a mental performance, on those (fires or fire-altars) composed of mind, and built up of mind. And whatever it is that (living) beings here conceive in their mind that was done regarding those mental (Agnis):—they establish them (on the hearths) and build them up (as fire altars); they draw the cups for them; they chant on (near) them and recite hymns on them,—of that extent was the development of Mind, of that extent its creation,—so great is Mind: thirty-six thousand Arka-fires; and each of these as great as that former (fire-altar) was. [Eggeling]

Sāyana's Commentary on the Nāsadiya Sūkta in the Taittiriya Brāhmaṇa [2. 8. 9. 3-6] differs from the above.

TAITTIRĪYA BRĀHMAṆA—SĀYANA'S COMMENTARY

ऋग्वेद १०.११.१२६.७

ANNOTATIONS ON THE COMMENTS OF MODERN SCHOLARS

KEITH: pp. 28-31. Keith interprets this Sūkta with reference to the Golden Egg (*Hiranyagarbha*) in which the principle of *Tapas* becomes manifest as the primeval Purusha equal to Mind with the principle of Desire, *Kāma*. This is a sound interpretation and consistent with what the Indian tradition also holds. Keith also recognised in this hymn a reference to the Supreme Deity as the first cause of the World beyond the two-fold categories or Duality of *Sat* and *Asat* etc. One important fact in the comments of Keith is the distinction recognised between *Hṛidaya* and *Manas* i.e. Heart and Mind. Heart is the real divine centre unmanifest and invisible, which is the seat of *Manas* or Mind.

MACDONELL: pp. 31-35. Macdonell accepts in this hymn the evolution of *Sat* from *Asat*. He accepts Water as the substratum from which was evolved *Manas* or *Buddhi* (Intelligence) by the power of *Tapas*. Although he complains, not quite correctly, about the lack of clearness and consistency he is convinced of the fact that this is a piece of sustained speculation and the starting point of the evolutionary Sāṅkhya system. His deep insight also saw in this hymn substantial agreement with the cosmogony of the

Brāhmaṇas which is the same as the *Hiranyagarbha-vidyā*, the Cosmic Golden Egg in which the Universal Soul is produced. He recognises the cosmogonic hymns of the R̥gveda as the precursors not only of Indian Philosophy but also of the Purāṇas which originally concentrated on the theme of the origin of the world (*Sarga-Pratisarga*).

Macdonell's meaning of *Raśmi* as the cord joining the *Sat* with the *Asat* also is noteworthy, as found in the phrase *Sūtram vitatam*, the extended string of creation. He also recognises the distinction between *Prayati* and *Svadhā* as the contrasted male and female cosmogonic principles.

WILSON: pp. 35-39. An excellent interpretation of *Sat* and *Asat* by Wilson is Matter and Spirit. The first Cause is Brahman in which the inactive matter and active spirit both existed undeveloped in their effect. The philosophy of Brahman as the transcendent cause being described in this Mantra is the view of Wilson.

COOMARASWAMY—Dr. Ananda Coomaraswamy in his book '*A New Approach to the Vedas*' made a new translation of Nāsadiya Sūkta couched in an apt and precise terminology as follows :—

R̥gveda, X, 129

"Non-existence (*asat*) then was not, nor Existence (*sat*); neither Firmament (*rajas*), nor Empyrean (*vyoman*) there beyond :

What covered over all (*āvarīvar*) and where, or what was *any* resting-place (*śarman*)? What were the Waters (*ambhaḥ*), Fathomless Abyss (*gahanam gambram*)? I.

Then was neither death (*mṛityu*) nor life (*amṛita*), nor any fetch (*praketa*) of night or day :

That One breathed (*ānīt*) breathless (*avāta*) by intrinsic-power (*svadhā*), none other was, nor aught there-beyond. II.

In the beginning (*agre*), Dark-Inert (*tamas*) was hid (*gūḥa*) by Dark-Inert (*tamas*). This all was fluid (*salila*), indeterminate (*apraketa*) :

Void (*tucchya*) by void (*ābhu*) was overlaid (*apihita*) : That One was born (*ajāyat*) by the all-might (*mahi*) of intension (*tapas*). III.

In the beginning, Will (*kāma*) arose (*samavartat*) therein, the primal seed (*retas*) of Intellect (*manas*) that was the first :

Searching the heart (*hṛd*) thoroughly by thought (*manīṣā*) wise-singers (*kavayaḥ*) found there the kin (*bandhu*) of existent (*sat*) in the non-existent (*asat*). IV.

What trace was stretched across, below, and what above ?

Seed (*retas*) was, Allmight (*mahimānaḥ*) was ; Intrinsic-power (*svadhā*) below, Purpose (*prayati*) above. V.

Who knows it aright ? Who can here set it forth ? Whence was it born (*ajātā*), whence poured forth (*visṛṣṭiḥ*).

These Angles (*devāḥ*) are from its pouring-forth (*visarjana*), whence then it came-to-be (*ābabhūva*), who knows ?

Whence outpoured (*visṛṣṭiḥ*) this came to be (*ābabhūva*), or whether one appointed (*dadhe*) it or not.

He who is Over-Eye (*adhyakṣa*) thereof in uttermost Empyrean (*vyoman*), he knows indeed, or knoweth not. VII.

From his commentary which is reproduced here we learn the following facts.

(1) He Believes that the trinity of terms Tamas, Rajas and Sattva is found in this Sūkta.

(2) *Manas* was the fecundating power or Buddhi, creative intellect of Brahman.

(3) He also takes note of the principle of Prāṇa (*अनीत्*) that refers to the duality of Prāṇa and Apāna.

(4) His explanation of *Svadhā* as the intrinsic power generated from the first cause or primeval source is also worth noting. The primeval source is explained as the Waters, *Nirguṇa Brahman*, or Unconscious Godhead.

(5) The principle of Veil (*Āvaraṇa*) is very clearly grasped, namely that the world of Matter is a Veil for the ultimate Reality.

(6) A brilliant exposition relates to the spirit of the last two mantras in which he does not find an expression of Scepticism but by implication understands a sound ontological statement about the existence of the ultimate Reality. He is right in saying that the language of Mantras 6 and 7 could not have been used by any one who did not believe in the highest Brahman as the final essence of all cosmos existing in the highest Empyrean (*Parame vyoman*). Thus Dr. Coomaaswamy subjected the Sūkta to a more detailed and specific analysis as follows :—

That is what is called a “late” hymn: from our present point of view it suffices that it antedates the earliest Upaniṣads by some centuries. A likeness to Upaniṣadic texts generally, and to our *Bṛhadāraṇyaka Up.*, I, 2, 1 and *Maitri Up.*, V, 2, in particular will be noticed at a glance. This similarity is partly one of verbal identity (*agre, sat, asat, tamas, salila, tapas, kāma, retas, manas, hṛd, tad-eka, ānīt = prāṇīti, vāta = vāyu, avāta = nirvāta, visṛṣṭi, visarjana* etc.), partly of verbal sense (*ambhaḥ, salila = āpaḥ, tapasaḥ-mahi = tejas, svadhā = māyā, śakti, svabhāva*), and partly of total statement. *Bandhu (= sa-jāta)* “kin” as of blood relationship, is an exceedingly well-found expression for the “opposite relation” of Existence to the Non-existent, God to Godhead, Essence to Nature ; as also in *Bṛhadāraṇyaka Up.*, I, 1. 2. As for *rajas*, granted that no more is here directly implied than “firmament” or “space” and that the *Sāṃkhya* as a formulated system

is of later publication, it still remains significant that in our hymn (not to speak of other Vedic sources) we have a trinity of terms (*tamas, rajas, and tapasaḥ-mahi = tejas = sattva*) employed in their correct factorial (*gaṇa*) senses to denote the principles of passivity, movement, and essentiality, “later” represented by the three *guṇas* more explicitly, and by the corresponding Trinity of Viṣṇu, Brahmā, and Śiva. By the “primal seed of Intellect” I understand rather “intellectual virility”, “creative intellect,” than the *source* of Intellect : cf. Ṛg Veda I, 71. 2, *Bṛhadāraṇyaka Up.*, I, 5, 7 and similar passages, where Intellect (*manas*) is the fecundating power that begets upon Utterance or Wisdom (*Vāc*). *Amṛta*, in the second stanza, is not “immortality,” but simply life, continued existence, as in Ṛg Veda, VII, 57, 6, and equivalent to *dīrghamāyuh* in X, 85, 19 ; the sense is “neither birth nor death as yet were”.

That “He breathes without air” (*avāta*, cf. later *nirvāṇa*, “despiration”) is a profound and significant expression, implying all the correlative of motion without local movement, and the like, which may be properly enunciated of the First Principle, for (only) where there is a duality, as it were” (*Bṛhadāraṇyaka Up.*, IV. 5, 15) could it be otherwise, The thought is taken up and further developed in several passages of the Upanishads, particularly the *Bṛhadāraṇyaka Up.*, as quoted above, p. 46, *Kena Up.*, 1, 8, “Know that as Brahman which breathes (*prāṇīti*) without breath

(*na.....pranena*) yet by whom breath (*prāṇa*) is breathed (*prāṇīyate*)", *Muṇḍaka Up.*, II, 1, 2, and 3, where That from which Intellect (*manas*) and Spiritus (*prāṇa*) are born (*jāyate*) is Itself imageless (*amūrtta*) un-intelligent (*amanasya*), de-spirited (*aprāṇa*), and *Taittirīya Up.*, II, 7, where That without which none might breathe (*prāṇyāt*) is self-less (*anātmya*), indiscriminate (*anirukta*), placeless (*anilayana*).

"By intrinsic power" (*svadhā*) : cf. *Ṛig Veda*, IV, 13, 5, "by what intrinsic power (*svadhā*) does he move?" and the answer in I, 144, 2, "When he (as Fire) dwelt diffused in the womb of the Waters (*apāmupasthe*), thence got he (*adhayat*) the intrinsic powers (*svadhāḥ*) whereby he proceeds (*īyate*)" : the waters, *nirguṇa*-Brahman, unconscious Godhead, being as explained above, the source of all omnipotence (*mahimānaḥ*) and facility (*kauśalya*). Essence being impotent (*stari*) apart from nature ; nature being power (*śakti*) and magic (*māya*), means whereby anything is done. Cf. *Bhagavad Gītā* IV, 6, "I am born by my own power," where *ātma-māyayā* is clearly the same as *Sva-dhayā*, cf. *mayayā*, in *Ṛig. Veda* IX, 73, 5 and 9.

"That one" is clearly here not an existence, for as we have seen, his mode is modeless, in that he breathes without breath : a similar conception is met with in *Ṛig Veda*, I, 164, 4 where That "which supports Him who is by way of being the first-born

embodiment," *prathamam jāya-mānam-asthanvantam..... bibharti*, is itself (bodiless", or more literally, "boneless" *anasthā*, that is to say "structureless". "That is not yet "Selfed" (*ātmanvī*)—"before creatures were, God was not God, albeit he was Godhead," Eckhart, I, 410. *Tamas* (as in *Maitrī Up*, V. 2.), *apraketa salila*, *gahanam gabhīram*, etc., are all terms naturally designating the undifferentiated, unintelligible Godhead, "which is as though it were not," Eckhart, I, 381 : *asat*, non-existent, *gūḷha*, hidden, there where "darkness reigns in the unknown-known unity," Eckhart, I, 368, Cf. p. 6 and Note 21.

"What covered o'er ?" That is, what and where was the world? *āvarīvar* being from *varī*, intensive reduplicated form of *vr*, "to cover," "veil." The world is thought of as veiling the ultimate reality, cf. *Ṛg Veda* V, 19, 1, "state after state is generated, veil (*vavri*) from veil appears," hence also the prayer, *Maitrī Up.*, VI, 35, with respect to the Sun, "That face do thou unveil (*apāvṛṇu*)" or "That door do thou open."

Our hymn is by no means necessarily an expression of scepticism : it is rather wonder than a wondering that is suggested. "Who knows" is no more "sceptical" than Kabīr's *tāsuk soi santa jānai* "who are the Comprehensors thereof" or Blake's "Did he who made the lamb make thee ? "He knows or knows not," if understood to mean "he knows and

knows not" would be sound theology. In the last stanza, alternative theories of "emanation" and of "creation by design" are propounded. In any case, the very form of the various statements and questions proves that sound ontological speculation was by no means a new thing, for it is inconceivable that such questions had been correctly formulated just a week or year before this particular hymn was published.

Not only are the terms and implications of our hymn all formally correct (*pramiti*) they tally also in form and content with those of the Upaniṣads. Yet we are asked to believe that Vedic thought was "primitive"—that the wise-singers of the Vedic hymns were able to express themselves in terms that have been universally employed elsewhere and otherwhen with a deep and known significance, and all without knowing what it was they said. It is as though it were argued that the law of gravity had been hit upon by lucky chance, long before anyone had consciously observed that heavy objects have a tendency to fall. Surely our faith in uniformity forbids us to imagine, what is outside the range of our experience, viz., that any sound formula, any clear statement of principles, could have been propounded by anyone who did not understand his own words. It would be far easier to suppose that such a statement had been propounded in the past by those who knew what they were saying, and that it had since come to be repeated mechanically

without understanding : but on the one hand, that would be to push the beginnings of wisdom too far back for the comfort of those who fondly believe that wisdom came into the world only in their own day, and on the other would need proof by some internal evidence of the presumed misunderstanding. I prefer to believe that wherever and whenever a proposition has been correctly and intelligibly stated (but that covers both verbal and visual symbolisms, both "scripture" and "art") the proposition was also understood. Problems of ontology are not so simple that they can be solved by "luck" or "inspiration" : on the contrary there is no sort of work more arduous than "audition," and here a man has need of all the power of the pure intellect. [A New Approach to the Vedas (1933), pp. 56-59].

OUR COMMENTS ON THE OLDER EXEGETICAL MATERIAL

1. Śatapatha

The comment is short, extending to three Kaṇḍikās only but the most important that we have on this Sūkta. Its unique exposition of the principle of Mind is as follows :—

1. Mind in the beginning before creation was undefined (*Anirukta*) and unformed (*Amūrta*).

2. Such Mind was the same as the Prajāpati himself described as *Anirukta* and *Amūrta* in the Brāhmaṇas.

This mind of Prajāpati desired to have a body (*ātmanam anvaichchhat*), that is to become an Ātman have a body or to (*Ātman* = body, cf. AV., 10.2.32). This was accomplished by the power of *Tapas* or Primeval Heat (*Devaushnya*). That single Fire was the Sun or the Universal Mind which became parcelled out into thirty-six thousand smaller fires each named an *Arka*. The number thirty-six thousand is arrived at by computing three hundred and sixty days of the year for a period of one hundred years which is equal to a man's life. Each day or *Ahorātra* period represents the burning of one *Arka*-Fire, and each one of them is a spark from the Universal Fire that is Sūrya. Both the

Cosmic Sun and its ray in the individual centre represent the Principle of consciousness, Intelligence or Mind (*Etāvatī vai manaso vibhūtiḥ*). According to the doctrine of *Puruṣho vai Yajñah*, it is stated that the Fires, the Soma Cups, the Altars, the Chants, and all the Rites are nothing but the symbols of Mind. The Mind is as great as Creation or Life. Again the Mind is as great as the Primeval Agni or Yajña Vēdi that was the Sun.

That first cause was the same as *Manas*. This is a cardinal exposition of the Nāsadiya Sūkta in which the Principle of *Manas* or *Buddhi* is given the highest place, viz. the transcendent Principle (*Anirukta* and *Amūrta*) and also the immanent categories which evolve as the body (*Śarīra*) and the Cosmos (*Virāj* or *Aṇḍa*) or the Pañcha-bhūtas. The author of the Śatapatha Brāhmaṇa in his pregnant remarks identifies both the transcendent Brāhmaṇ beyond co-related categories and the manifested Cosmos with Mind (*Manas Tattva* or *Avyaya Puruṣa*) in its twofold aspects.

(2) Sāyaṇa in his Commentary on the Taittirīya Brāhmaṇa :

The Taittirīya Brāhmaṇa includes all the seven mantras of the Nāsadiya Sūkta (II.1.9.3-6). Sāyaṇa's comments there are different from what he has given on the Ṛigveda.

In explaining mantra 1 he takes *Sat* as *Nāmarūpa*, the world of names and forms and *Asat* as anything

absolutely non-existing like the horn on a man's head. The states beyond these two categories is called *Avyakta*. *Rajas* is said to imply the three *Guṇas Sattva*, *Rajas* and *Tamas*. *Vyoma* is the synonym of *Ākāśa*, taken to be the symbol of all the five material elements and the gross objects produced by them. The *Brahmāṇḍa* or the cosmic egg with all its sheaths like *Mahat-tattva*, *Manas* and *Pañcha-Bhūtas* did not exist. When the egg did not exist there were no sheaths to conceal it. In the case of intermediatery *Pralaya* the Waters exist, but in the case of *Mahā-Pralaya* great dissolution deep sea water did not exist.

In mantra 2 he states that there were no creatures (*Prāṇin*) and hence no life or death. The signs of Day and Night, viz. *Sūrya* and *Chandra* also did not exist. Only the Great Brahman existed by his intrinsic power which was *Māyā*, the first cause of all creation (*Sarva jagat kāraṇarūpā*). There was no movement or activity as symbolised by *Vāyu* or *Vāk*. Thus there was nothing higher than the one Brahman.

In the third mantra *Tamas* is translated as *Avidyā* *Māyā* or basic ignorance which is the cause of the world. *Māyā* envelopes Brahman as *Tamas* and conceals the objects. The first *Tamas* refers to a certain aspect or potency existing in Brahman by which the second *Tamas* of *Avidyā* or *Jagat* could be created. This supports the view of *Sāṅkhya* which believes in *Sat-kārya-vāda*. *Sāyaṇa* explains *Ābhu* as *Jagat* which he

says was covered in its first cause by a finitizing principle called *Tuchchha*. Basic ignorance (*Mūlā-jñāna*) is called *Tuchchha* which conceals the manifest world at the time of dissolution. *Sāyaṇa* understand the world of *Tamas* as produced by the pre-existing *Avyakta*, *Tamas* or *Mūlā-jñāna* by the power of *Mahat* which is his translation of the word *Mahi* in mantra 3.

In mantra 4 he takes *Manas* as mind of *Parama Brahma* and *Retas* as primeval creation which is the same as *Kāma*. *Manas* is the first principle of Brahman's creation (*Brahmanah Sisrikshā-rūpam*). *Sat* is taken as the material world (*Bhūta-Bhautika-rūpa Jagat*) and *Asat* as the pre-existing *Avyakta*, *Kāma* as the link between the two (*Bandhana-hetu*).

In mantra 5 the word *Rasmi* is taken to be the individual consciousness derived from a universal source (*Svayaṁ-prakāśachaitanya*). *Tirashchīna* also is taken to be the pervasive quality of consciousness in Matter or *Chaitanya Brahma* manifesting itself through the objects, just as a thread is bound over and above a ball, similarly *Parama Brahma* encompasses from all sides the individual consciousness. To speak of Him as above and below is not possible. *Retodhā* is translated as essence, the *Chaitanya* principle inside the material form. The *Mahimānah* represent the material objects produced by the power of the *Chaitanya* essence. *Svadhā* is translated as *Māyā* or *Avidyā*, the lower intrinsic power of Brahman and

Prayati as Brahman or *Paramātmā* who is the substratum (*Ādhāra*). The two correspond to *Prakṛiti Puruṣha*.

In verse 6 Sāyaṇa explains the expression 'Who knows,' 'Who has said', as referring to the doctrines of Kaṇāda, Gautama and Kapila and the Mādhyamic philosophers but this entails an anacronism.

Mantra 7 is explained in terms of the material cause (*Upādāna-kāraṇa*) of the universe which is not known even to Brahman who is the Lord of the worlds.
(3) Sāyaṇa's Commentary in the R̥gveda.

This is much more elaborate than what he has interpreted in the Taittirīya Brāhmaṇa. Although in substance there is not much difference, there is however a tendency throughout to interpret the truth in conformity with the Vedānta doctrine of Śri Śaṅkarāchārya. In style also he has become polemical reflecting the spirit of his contemporaneous philosophical texts.
